

March 23, 2020

DDP Specialty Electronic Materials US 5, Llc and DDP Specialty Electronic Materials US, Inc. (wholly owned subsidiaries of DuPont de Nemours, Inc.; DDP) currently offer 4 EPA approved products for sale in the US for use in textile preservation:

<b>EPA approved Product Name</b>	<b>EPA Registration Number</b>	<b>EPA Registrant</b>
SILVADUR™ 900 Antimicrobial	707-313	DDP Specialty Electronic Materials US 5, Llc
SILVADUR™ 930 Antimicrobial And SILVADUR™ 930 Flex Antimicrobial	464-785	DDP Specialty Electronic Materials US, Inc.
SILVADUR™ 960 Flex Antimicrobial	48737-3-464	DDP Specialty Electronic Materials US, Inc.

EPA approvals for these products are current with USEPA and the maintenance fees are paid annually to maintain each registration. Before an EPA registered product can be used for manufacture in the United States, it must also be registered for use in that State. Please contact DDP to confirm that the pesticide is registered for use in the state of interest.

These products are EPA approved as long-lasting antimicrobial preservatives for industrial products, that when incorporated into materials during the manufacturing process, imparts antimicrobial activity and prevents the growth of bacteria, mold and mildew that may cause unpleasant odors, discoloration or deterioration of the treated product. The allowable dosing rate limits are specified on the EPA approved label for each product. Labeling for pesticide products is approved by USEPA and enforceable by Law under the Federal, Insecticide, Fungicide and Rodenticide Act.

Silver-containing products are currently under review by EPA under its Registration Review program. The EPA Registration review process is a standard program for the review of all active products. We have made a commitment to meet all applicable data requirements falling under the Registration Review, thus ensuring continued registration of these products.

Any change in registration status or other compliance issues which might impact the ability to provide SILVADUR products will be communicated to customers prior to any implementation date.
